

CHINMAYA PATI

Full-Stack • AI Engineer (7.7 Years)
Bengaluru, India • 8699958048 • chinmaya.cp@gmail.com

Portfolio Link:
cnp96.github.io

Full-stack & AI Engineer with 7+ years of experience delivering scalable distributed systems and AI-powered products across SaaS, EdTech, and FoodTech.
Expertise in Node.js, React, Python, and Golang, with a focus on microservices and LLM-driven applications. Proven track record of taking 0→1 products to market and optimising systems to drive significant business growth.

CORE COMPETENCIES

Backend: NodeJS, Python (Django), Go

Frontend: React, React Native, Next.js, Design Systems (Tailwind/Shadcn/Figma), State Management (Zustand/Redux/Tanstack Queries)

Databases: MongoDB, PostgreSQL, pgvector, Redis

Cloud & DevOps: AWS (EC2, Lambda, SQS, CloudWatch, SES, SNS), GCP, Docker Swarm, Kubernetes, Traefik/Nginx, CI/CD using Github Actions

AI / ML: LangChain, RAG, Prompt Engineering, Agentic Orchestrations

Queues / Workflows: BullMQ, AWS SQS, Celery, Kafka, n8n Automations

Observability: Datadog, Newrelic, OTEL(Prometheus, Grafana, Loki), RudderStack, Mixpanel

Architectures: Distributed Systems Design, Microservices, Event Sourcing, Domain-Driven Design

EXPERIENCES

Tech Co-Founder | Growfit

June 2024 – Present • growfit.pro / dailytiffin.co

Sole engineer leading all products, services, AI systems & infrastructure.

- Scaled a multi-brand D2C food delivery and subscription system to **\$390k ARR with 82% customer retention** by owning the architecture, backend, frontend, and infrastructure.
- Engineered the core customer app features, including subscriptions, meal tracking, food customisation, and ad-hoc ordering for a user base of 500 daily active users.
- Architected and implemented the delivery planner and routing engine, optimising logistics and supporting complex subscription flows (skips, pauses, recurring payments).
- **Developed a RAG-based** WhatsApp support agent (LangChain) to automate user queries, resulting in a 95% reduction in manual support load.
- **Engineered** an AI-assisted menu planner leveraging **embeddings and vector search** (pgvector) to handle food customisation at scale, leading to a 25% increase in meal personalisation adoption.
- Implemented robust background jobs and event-driven workflows using BullMQ for critical systems (order processing, inventory updates), ensuring >99.9% uptime.
- **Automated** daily, weekly, and monthly reporting pipelines for inventory and unit economics, saving operations 10+ hours per week.

Senior Software Engineer | Upraised (acquired by Kello)

Mar 2021 – May 2024 • upraised.co → kello.ai

- **Designed** and **launched** the core interview prep platform with scheduling flows and integrated Dyte/Zoom; incorporated AI evaluations to generate feedback on verbal and non-verbal cues.
- Developed a secure online testing platform, incorporating real-time system checks and fraud detection, resulting in high exam integrity across 500k concurrent users.
- Contributed to the full-stack development of the learners' dashboard, streamlining access to coaching, content, and payment portals, improving feature engagement by 46%.
- **Designed** a recruitment CRM that automated the placement lifecycle, portfolio creation, and opportunity pipelines, improving time-to-placement by 70%.

Software Engineer | LoginRadius / Social9

Sep 2018 – Feb 2021 • loginradius.com / social9.com

- **Engineered** a multi-cloud distributed Data Service Layer (DSL) for event sourcing and access control, designed to support **scaling to over a billion user identities**.
- **Migrated** the legacy admin console from Angular to React, achieving a **3x performance improvement** for user operations and a **2x faster** Software Development Life Cycle.
- **Decoupled** large monolithic services into a microservices architecture, reducing the average deployment time by 80% and improving system maintainability.
- **Optimised** a Node.js data export service, increasing throughput to **process millions of records** with a 40% reduction in execution time using a cluster running architecture.

PROJECT HIGHLIGHTS

CollabSign

Dec 2025 – Present • collabsign.ai (in closed-beta 100+ users)

AI-powered creator-brand collaboration SaaS.

- **Developed** an agentic contract generation system with Aadhaar e-sign flow, reducing significant time-to-contract finalisation.
- **Engineered** the core CRM and automated workflows for managing brand collaborations, invoices, and payment reminders, reducing missed overdue payments.

Trading Rate Server

Oct 2022 – Nov 2022 • (freelance work)

A custom rate server for a broker to trade equity, commodity, and derivatives

- **Integrated** and managed multiple tick providers for real-time rates, establishing failover and caching logic to maintain >99.9% uptime for a high-frequency trading broker.
- **Implemented** real-time tick processing using **Redis Pub/Sub** and **WebSocket streaming**, achieving **p99 market data delivery latency under 150ms**.
- **Built** dynamic tooling to manage scrips and apply custom pricing logic on live rates, enabling rapid adjustment to market conditions.

EDUCATION

B.Tech in Computer Science — Lovely Professional University, 2018
